How to install Robolinux Mate series 12

Please follow these simple instructions carefully!
Backup all of your important existing data on your machine. Most PC Users have a backup, make sure you do this before you proceed!

Download the Robolinux series 12 iso file to your PC or laptop.

Burn the Robolinux.iso you downloaded onto a DVD or USB Stick.
In almost all cases Robolinux will find your Wifi driver so you can install it using Wifi. If not then be sure you are plugged into the internet with an ethernet cable on your router, otherwise your installation will fail to use the network mirrors and you will not be able to install any drivers or software.

**PLEASE READ THIS WARNING:**
All Robolinux series 12.05 & above versions SUPPORT UEFI & Legacy BIOS

Insert your USB device or DVD into your PC or laptop and reboot it.

After you have booted your PC or laptop it will automatically load either the blue Legacy BIOS Robolinux Live boot menu screen below or the black screen that says “Robolinux Live with Installer” which works with UEFI.

All Robolinux series 12.05 & above versions SUPPORT UEFI & Legacy BIOS

Insert your USB device or DVD into your PC or laptop and reboot it.

After you have booted your PC or laptop it will automatically load either the blue Legacy BIOS Robolinux Live boot menu screen below or the black screen that says “Robolinux Live with Installer” which works with UEFI.

---

**Robolinux Live Menu**

- **Live - boot the Live System**
  - xwindow - boot live in safe graphics mode
  - text - run text mode
  - hdd - boot from hard disk

Press Enter to edit options
Select your language and click on continue.

Select your keyboard layout and click on the continue button.
Please note that it is not necessary to select "Install 3rd-party software" as the Robolinux OS already has them in the iso file.

Select your installation type and click on Install Now.

Select your time zone by clicking on the country and city and press the continue button.
Enter your pertinent information and your password. When you are finished click on Continue. Be certain to remember or write down your password for future reference. This will also be your super user password "sudo" for Administrative access.

Robolinux is now installing. This process is quite fast. Normally just a few minutes.
Congratulations! Robolinux is now fully installed. It is time to restart your computer.

Please remove your DVD or USB stick and press enter.
Here is the Robolinux Grub boot screen for a non UEFI system or with multiple partitions on the hard disk.

As you can see we do not live on a spinning ball. Do the the research like Robo plus tens of millions of other people who have an open mind and a desire to seek the truth. Or Don't! One thing is for sure "The truth will set you FREE!" If you are interested in seeing over 600 official US Government Navy & NASA documents admitting that the earth is flat, send an email to Robo and he will provide you with the published documents that are available right now on official US Government & NASA websites.

Feel free to change your Grub boot splash screen as you wish. Use CLI or install the GUI app called "Grub Customizer".

Here is the Robolinux User Login screen. What you will see is YHWH's (That's our Father in Heaven's real name) original Otiot language on the top right side of the Robolinux Series 12 Mate login screen that has been translated into English. By the way the name Yashua is Jesus' real name. There is no "J" in the Ancient Aramaic language. For those who are interested in the the truth feel free to contact Robo anytime and ask him for his greatest treasure which is an Otiot language pdf file. Robo will email you his greatest treasure for free anytime. If you want to change this login screen then simply use the "Login Window" found at the very bottom of the Settings options in the Mate control center.

Welcome to Robolinux Mate Series 12!
Enjoy the freedom of NEVER being TRACKED again in your life!
